

Fabric/Yarn Rolls & Tire Stacking Rack

Fabric/Yarn Rolls & Tire Stack Rack is mainly composed of a base plate and a side door. There is a waist-shaped hole on the pillar which realize sliding and folding of the side door as well as connecting the side door and the base.

This product is easy to use, and the usage scenarios can be changed at will. The material of the bottom plate can use grid or wood according to the size to prevent loss, and beams can be added to suit the transportation & storage of tires. It is more convenient to use, more space-saving and more efficient.

Stack Rack combines a single pallet unit load capabilities with product safety and positive stack alignment of stacking posts. Welded tubular steel construction ensures dependable load carrying strength and is designed for forklift handling.

Features:

- Ideal solution for palletized cargo.
- Easy to stack and move around with a fork truck.
- Rearrange floor space quicker & easier than pallet racking.
- Customized to suit your products and storage environment.
- Reduce shipping costs, save space during slow periods
- Gain 70% storage space when folded.
- Assembled and disassembled within seconds.
